

0x8004010F: Outlook data file cannot be accessed.

Today I moved my .PST files and this is the error I received:

"0x8004010F: Outlook data file cannot be accessed"

or

"0x8004010F: The operation failed. An object could not be found"

1. From Outlook 2010 click File>Account Settings>Account Settings
2. Click Change Folder
3. Click New Outlook Data File (This is just temporary)
4. Give it a name (I used "Test")
5. Click the + to the left of the folder name to expand the subfolders. Click Inbox. Click OK.
6. Then Click Change Folder
7. Click Select the one you want
8. Click the + to the left of the folder name to expand the subfolders. Click Inbox. Click OK.
9. Close Account Settings and click send/receive.
